

At this point in time Artificial Intelligence (AI) is one of the most talked about Topics. For this ~~matter~~ the question is Should AI be included ~~in~~ in the daily worklife? is bigger than ever. So let's have a look at both sides.

First of all, one of the strongest arguments against the usage of AI in work life is the potential loss of jobs. Many employees fear that AI could replace them in their positions. For example, in the manufacturing industry, robots have ~~at~~ already taken over many tasks that were previously done by humans.

Furthermore, there is also concerns about data privacy. Companies that use AI systems collect large amounts of personal data, which could be misused. A recent study showed that 67% of employees are worried about how their data is being used by AI systems at work.

However, looking at the other side, AI offer many benefits for the workplace. It can automate repetitive tasks and allow employees to focus on more creative and strategic ~~work~~ work.
